USAF High Frequency Global Communications System

From The RadioReference Wiki

The **USAF High Frequency Global Communications System** is a worldwide network of 15 high-power [HF](#) stations providing command and control communications between ground agencies and US military aircraft and ships. Allied military and other aircraft are also provided support IAW agreements and international protocols as appropriate. The HFGCS is not dedicated to any service or command, but supports all DoD authorized users on a traffic precedence/priority basis.
