Stuff from tonight's Radio Monitoring Net

From Jared,

Jock,

For the useful goodies email, here is the new link for the MotoDMR netwatch that the repeater caretaker sent me. http://44.98.245.10:42420/CallWatch

https://www.repeaterbook.com/repeaters/details.php?state_id=36&ID=15502

This is the DMR machine in question. I will send out an update if it gets back on the internet and is able to connect to the network again. For now it is on the air for local use, I'll confirm tomorrow if my memory is correct with it being local talkgroup 009 and Timeslot 2.

From Jared:

The freeware program I use to monitor NAVTEX and WEFAX is called SeaTTY. It uses your computer soundcard to perform the demodulating. All you need is to feed audio from your receiver and tune to the correct frequency and mode. The program can be downloaded, free of charge, at the following:

https://www.dxsoft.com/en/products/seatty/

I have provided some samples I received in the past, both NAVTEX bulletins and WEFAX transmissions.

Also, If you own a legacy TNC, such as a Kantronics KAM or a AEA PK232; those modems can also receive the same.

73,
Denis W1WV
